## COCONUT FIBER SUBSTRATE

100% natural substrate. Ideal for natural terrarium set-ups. Increases humidity in terrariums. Nutritional substrate for live plants. Instructions: Place the brick in a pail/bucket or sink. Add 3-4 liters of water. Allow the brick to expand for 20-30 minutes. Wring out excess moisture. For small animals, snakes and tarantulas, lay out moist substrate in the sun to dry before moving to your animals's enclosure.

# CALCI-SAND TERRARIUM

Calci Sand is suitable for terrariums of desert habitats that can comfortably accommodate reptile species from arid environments.

Simply spread the product evenly in the bottom of the terrarium to create a bed of substrate. It is not a hazardous product if eaten by the animal as it is an excellent source of calcium beneficial to the body. Carefully clean the soiled parts systematically and progressively replace the entire substrate every six weeks.

## MINI-PEBBLE TERRARIUM

Substrate composed of mini pebbles, ideal for aquariums and aqua-terrariums for aquatic turtles or axolotls. This substrate is a good bacterial support that will promote the biological balance of the aqua-terrarium. With the Tecatlantis syphon gravel washer it will be easy to maintain this heavy substrate during water changes.
